Concentrated Fish Oil Extract EPA

Taking Omega-3 makes a patient with Inflammatory Rheumatoid better with less swelling and less pain including less congested joints in the morning, but more smoothly movements with more energy. The recommended dose is 3g./day at least 3 months.

Besides EPA's outstanding inflammation reducing quality, EPA in the brain can make people feel full if there is a lot. This may lead to another hope in controlling or trying to lose weight.

EPA is an important part in every cell without it we cannot communicate with each other. A scientist finds that EPA helps rid depression and bipolar disorder.

An inflammation can start in the body (any parts, inside or outside). It will put the organs in danger and cause them to lose their functionality. The Omega-3 Fish oil acid can be categorized into 2 types : EPA is good for curing an inflammation, a heart disease and blood vessels and DHA is good for the brain and the retina.

EPA produces a Hormone like substance called Eicosanoid, which can cure an inflammation. DHA, on the other hand, will not produce Eicosanoid, but works like a cover to the cells at the brain and at the retina. A scientist finds that DHA can be transformed to EPA inside the body, EPA cannot.

In the nature, both of the fat acids are found together and work close to each other. Both help reduce the levels of the Cholesterol and the Triglyceride in the blood. But, each has its own amazing quality. EPA is good at eliminating all the inflammatory processes (both chronic and sudden cases). It will stop the inflammatory pain effectively; for example, an inflammatory joint (in a patient with Osteoarthritis and one with Autoimmune disease as SLE or Inflammatory Rheumatoid).
